

SEO Health Check

Every page on albertscott.com, scored against what actually moves search rankings and social visibility — plus the fastest path to closing the gap.

- **Nothing has been changed on the site.**
This is a read-only findings report. We'll only touch live pages once you've reviewed the plan below and told us what to proceed with.

OVERVIEW

Where the site stands today

The foundation is solid — sitemaps are clean, structured data passes on every page, and nothing is accidentally blocked from Google. What's holding it back is a short, fixable list: a few of these fixes take minutes and clear the majority of what's flagged below.

719 of 1,352 checks pass outright

Scanned across 113 pages, posts, and projects — every indexed piece of content on the site. One change alone (below) resolves the single largest gap.

How that splits out:

719 CHECKS PASSED	351 WORTH IMPROVING	282 PRIORITY ISSUES
----------------------	------------------------	------------------------

Scanned against on-page fundamentals — titles & descriptions, headings, images, internal linking, social tags — and technical setup (sitemaps, redirects, indexing rules). Breakdown: 57 site pages, 24

portfolio projects, 13 blog posts, 19 category/tag pages.

WHERE TO START

One setting is quietly breaking every shared link

113/113

PAGES AFFECTED

Every page on the site is missing social preview tags — the image, title, and description that show up when a link is shared on Facebook, LinkedIn, or in a text message. Right now, any link to albertscott.com shared anywhere shows up blank: no image, no custom preview.

The cause is a single missing setting — there's no default share image configured in the site's SEO plugin. Adding one fixes the preview for all 113 pages in one change, no per-page work required.

FINDINGS

What needs your attention

Old test pages are live to the public

3 pages **YOUR CALL**

Pages named "**test page**," "**test-modules**," and "**Form Ads - TEST**" are published and publicly visible — they're not just unfinished, they're actively dragging down the site's overall quality signal to Google, since search engines judge a site partly by its weakest pages.

PROPOSED FIX

We'd unpublish or delete these test pages (final call is yours — some may be safe to remove outright, others might need a quick look first).

31 pages have no search description at all

48 pages **QUICK FIX**

When a page has no meta description, Google writes its own — usually an awkward snippet pulled from wherever on the page, not the pitch you'd want a searcher to read. A further 17 pages have descriptions that are too long and get cut off mid-sentence in search results.

PROPOSED FIX

Write concise, on-brand descriptions for the 31 pages with none, and trim the 17 that run long. Straightforward content work — no technical changes needed.

86 images have no alt text

86 images **QUICK FIX**

Alt text describes an image for people using screen readers and for Google's image search. Without it, those 86 images are invisible to both — a missed accessibility basic and a missed source of search traffic.

PROPOSED FIX

Batch-add short, descriptive alt text across the affected images.

No visibility into how the site actually ranks

sitewide **QUICK FIX**

Google Search Console isn't connected to the site's SEO tool. That means no data at all on what people search to find the site, which pages actually get clicks, or whether pages are indexed properly — every recommendation right now is based on-page structure alone, not real search performance.

PROPOSED FIX

Connect Google Search Console — a one-time setup step that unlocks ranking and click data going forward.

The Clients page has a broken-looking URL

1 page **QUICK FIX**

The Clients page loads at `/?page_id=1807` instead of a clean address like `/clients/`. Beyond looking unfinished, URLs like this are harder for Google to rank and unpleasant to share.

PROPOSED FIX

Assign it a proper permalink (e.g. `/clients/`) with a redirect from the old link so nothing breaks.

Most pages aren't targeting a specific search term

93 pages **ONGOING**

93 of 113 pages have no focus keyword set, meaning the site's SEO tool isn't actively optimizing most of the content for anything specific searchers type in. This is less urgent than the items above, but it's the difference between pages that rank for something on purpose versus by accident.

PROPOSED FIX

Assign a target keyword to key pages first (service pages, top blog posts), then work through the rest over time.

11 pages are hidden from Google on purpose — or by accident

11 pages **YOUR CALL**

11 pages are marked "noindex," meaning Google is explicitly told to skip them. This is often intentional (thank-you pages, internal test pages) — but worth a quick check that nothing meant to be found is on that list by mistake.

PROPOSED FIX

We'll send over the list of 11 pages for a quick yes/no review.

DETAIL

Pages needing the most attention

Ranked by number of priority issues found on the page itself.

PAGE	FLAGS	ADDRESS
Form Ads v2	5 priority · 3 minor	/amazon-growth-audit-v2/
Book a Call	5 priority · 3 minor	/book-a-call/
Form Ads	5 priority · 3 minor	/amazon-growth-audit/
test page (<i>test content</i>)	4 priority · 4 minor	/test-page/
DSP	4 priority · 4 minor	/dsp/
For Amazon Brands v2	4 priority · 4 minor	/for-amazon-brandsv2/
Form Ads – TEST (<i>test content</i>)	4 priority · 4 minor	/form-ads-test/
test-modules (<i>test content</i>)	4 priority · 4 minor	/test-modules/
TACoS vs. ACoS (blog)	4 priority · 3 minor	/blog/tacos-vs-acos-what-amazon-managers-need-to-know/
Clients	4 priority · 5 minor	/?page_id=1807

RECOMMENDED ORDER

How we'd sequence this

Fastest wins first — most of this list is executed by us, not asked of you. Only two steps need a decision from your side.

1 Add a default social share image.

Fixes the 113-page social preview issue in one change.

2 Decide on the test pages and the Clients page URL.

Both need a quick decision from you before we touch anything live.

3 Connect Google Search Console.

Unlocks real ranking and click data for every future decision.

4 Write the missing search descriptions and image alt text.

Mechanical, high-volume content work — 31 descriptions, 86 images.

5 Confirm the 11 hidden pages are hidden on purpose.

A quick review list, not a project.

6 Start assigning target keywords to key pages.

Ongoing work, starting with top service pages and blog posts.

SIGN-OFF

What would you like us to proceed with?

Check off anything you'd like us to move forward on — we'll leave everything else as-is until you say otherwise.

- ☐ **Add a default social share image**
Fixes broken link previews sitewide

- ☐ **Remove or unpublish the test pages**
test page, test-modules, Form Ads – TEST

- ☐ **Fix the Clients page URL**
Move off `/?page_id=1807` onto a clean address

- ☐ **Connect Google Search Console**
Unlocks ranking and traffic data

- ☐ **Write the 31 missing search descriptions**
Plus trim the 17 that run too long

- ☐ **Add alt text to the 86 flagged images**
Accessibility + image search visibility

- ☐ **Send the 11-page noindex list for review**
Confirm nothing's hidden by accident

These checkboxes are just for your own reference while reading — reply to Eikko's team with which items to greenlight, and we'll take it from there. No changes go live without your word.
